## **Azima DLI to Showcase New WATCHMAN Reliability Portal at Solutions 2.0 Conference**

*New Flexible, Web-Based Solution Provides Critical Machine Diagnostics and Analysis for In-House, Fully Outsourced or Hybrid Condition Monitoring Programs*

**WOBURN, Mass. – November 16, 2009** – Global condition monitoring services company [Azima DLI](#) today announced that it will be demonstrating the latest version of its WATCHMAN Reliability Portal at the [Solutions 2.0 Conference](#), taking place November 17 – 19, 2009 in Daytona Beach, Fla. Located in booth #214, Azima DLI will showcase the business benefits of its flexible services offerings that leverage its enhanced web-based portal to maximize the value of condition monitoring programs and improve machinery performance and reliability across the plant.

The Solutions 2.0 Conference features several reliability and operations solutions conferences including the 24<sup>th</sup> International Maintenance Conference (IMC-2009), Predictive Maintenance Technology (PdM) Conference 2009, Operations Performance Summit (OPS) 2009 and LubricationWorld. These focused events target maintenance and reliability professionals who are responsible for aligning equipment reliability with organizational performance, and for programs that predict machinery condition through advanced sensing technologies.

Now available as a hosted software solution, Azima DLI's WATCHMAN Reliability Portal 2.0 supports the industry's most flexible condition monitoring programs. No matter what your organization's preference, in-house, fully outsourced or a hybrid program, Azima DLI's WATCHMAN Reliability Portal provides plant operators and engineers with timely access to important machine diagnostics and analysis to ensure appropriate steps are taken to promote machine reliability and uptime, while decreasing the costs associated with unscheduled maintenance. Company representatives will discuss the latest WATCHMAN Reliability Portal features with conference attendees while also helping them gain a greater understanding of what to expect from cloud computing in terms of functionality and costs as well as practical steps for deploying cloud-based approaches in their current operating environment

"The Solution 2.0 Conference's focused, forward-thinking audience of maintenance and reliability professionals has shown that they want more flexibility within their IT infrastructure while maintaining optimal uptime levels," said Azima DLI President Jonathan Hakim. "This becomes an increasingly difficult proposition as the economy and the skills drain have taken a heavy toll on the manufacturing and energy industries. As resource scarcity increases, hosted solutions offer enterprises critical collaboration, quality and security benefits that increase the effectiveness of condition monitoring programs while reducing IT costs."
